Cheatsheets / **OWASP Top 10: Security Misconfiguration**

codecademy

Misconfiguration, Where!?

What Is Security Misconfiguration?

Security Misconfiguration is a class of vulnerability
where security is impeded due to how one or more
pieces of software are configured.

Why Does Security Misconfiguration Happen?

Security Misconfiguration is caused by insecure default
settings or by making changes to settings that degrade
security.

Why Is Security Misconfiguration Dangerous?

Security Misconfiguration is dangerous because it
reduces the overall security of an environment.
